

Pediatric Cardiology

A typical visit begins with the assessment of vital signs such as heart rate, blood pressure, height and weight, followed an electrocardiogram. You then will meet with the pediatric cardiologist who will take a thorough medical history, as well as cardiac and non-cardiac family history. Based on this evaluation and physical examination, if further testing is needed (such as an echocardiogram, Holter monitor, or exercise stress testing) it can be performed on the same day as your visit.

• *Services offered:*

- Electrocardiogram (ECG)
- Transthoracic echocardiography
- Fetal echocardiography
- Holter monitoring
- Event recording/monitors
- Non-invasive stress testing.
